Server Virtualization

Every business, municipality and institution faces the risk of experiencing a serious event, preventing it from continuing normal operations. Contributing factors can be as simple as a stolen laptop or as catastrophic as a hurricane Katrina, the Northeast Blackout of 2003 or the recent earthquake in China.

TDC Systems Integration is an award-winning, multi-million dollar systems integrator with more than 13 years in business. Our disaster recovery services are designed to help protect your prized business assets...data and information.

From access control and building security, to backup systems for PCs and telecommunications, our skilled staff will customize disaster recovery services to fit your unique business needs.

**Disaster recovery** is the process, policies, and procedures of restoring operations critical to the resumption of business including the regaining of access to data, communications, workspace and other business processes after a natural or human-induced disaster.

## DISASTER RECOVERY FACTS:

- Nearly 60% of North American businesses lack a disaster recovery plan to resume IT services after a disaster or breach.
- 93% of American businesses without a DRP are out of business in five years.
- 50% of businesses that lose their data go out of business in 24 months.

Awards—Technology Industry  
Award

Catastrophic events such as hurricanes and terrorist attacks are very real threats to domestic and international business and industry alike. Firms, big or small, that ignore the risk a major weather event, sabotage, human error, a major power outage or an act of terrorism are headed for disaster. The good news is, TDC Systems Integration can help your business develop, implement and test a disaster recovery plan to help you continue serving your valued customers.

Protecting your company's sensitive information, private data by implementing a backup plan is paramount. The network infrastructure and tailored operating systems are key to your business survival in an increasingly competitive marketplace.

## NEW TREND — DISASTER RECOVERY TECH

Server Virtualization. It is a relatively new form of technology that has gained in popularity. Server virtualization allows your company to consolidate multiple server functions on one host server. This technology is a practical and cost effective method of achieving disaster recovery. There are numerous benefits associated with server virtualization that our skilled staff is prepared to discuss with you.

## AVOID SERIOUS BUSINESS LOSS & DISRUPTION

Are you prepared in the event your business or organization experiences a serious incident that prevents you from continuing normal operations? We hope the answer is yes.
