LAN/WAN Services:

One of the strengths of TDC Systems Integration (TDCSI) is based on our ability to strategically plan and install LAN/WAN systems for our clients. Regardless of your current networking operating system or topologies, we will customize a solution to fit your business needs. We specialize in emulating, in a classroom setting, an actual LAN/WAN utilizing advanced technology such as routers high speed Hub's, cabling (10/100 BaseT, 10 Base2/5, FDDI), ATM switches, communication servers, Internet connectivity devices and T-1 circuits from the Bell Company, etc.

Technology Assessment:

Allowing companies to communicate in various locations is another one of our strengths. We are prepared to conduct a technology assessment of your network to help you get the most out of it. And we'll identify the required resources to generate the most efficient communications from your new or existing network. TDC conducts an assessment for all projects, whether they be completed internally or contracted out to other firms. Our highly skilled, trained staff provides both company wide and departmental assessments.

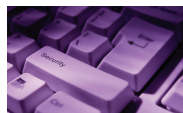

Training for IT Personnel:

As one of our customized services, for the past several years we have successfully provided advanced IT training to AT&T in numerous states. Additionally, our experienced instructors have taught classes for private businesses of all sizes as well as Fortune 100 and Fortune 500 companies.

Business Process Re-engineering for IT

We provide process re-engineering services to several customers.

In order for us to create applications we must understand important aspects of your business. After detailed meetings with department heads we will assess your current technology to incorporate any new technology. Our process re-engineering experience has allowed us the opportunity to create the company systems architecture, remote communications, creations of new business processes and other services.

Other Information Technology Services:

- Network Installation/Support
- Wireless Access Implementation
- Software/Web Development
- Hardware/Software Sales
- IT Staffing
- Email System Creation
