To Whom It May Concern,

I am very pleased with the services, support, and consulting performed by TDC Systems Integration during the MarinHealth hospital replacement building project. All representatives of the company were very professional and knowledgeable of the technology systems being implemented.

The firm did a great job working with the hospital various departments performing the systems' assessment, conducting meetings, and assisting with systems' integration into the new hospital building. I was pleased with how they verified and put measurements in place to make sure our existing clinical systems will work on day one.

We appreciate how their team created an emulation lab to pre-install and integrate all critical clinical and infrastructure systems to make sure the systems operated properly within the specifications. That proved to be effective on this project which allowed modifications to the infrastructure and other applicable systems to adhere to the specs and schedule.

Mr. Dozier and his company were instrumental in reviewing technical drawings and submittals. They also did a good job coordinating weekly IT meetings with the vendors/subs and the general contractor.

I would recommend TDC Systems Integration for similar services for other projects.

Sincerely,

Michael Aubry
Director of Technical Services
